# Mobile Solutions for a Modern Storeroom

A busy storeroom can check out thousands of items to hundreds of people every day, and productivity can take a hit when workers have to wait around for missing inventory or slow transactions. That's why an organized and easy to use inventory management system is an essential part of any efficient tool crib or storeroom. Inventory management systems like CribMaster can help storeroom attendants ensure their crib is operating at peak efficiency by giving them the ability to manage inventory availability through real-time data and increase their transaction speeds to get their customers back to work as soon as possible.

## Our Full Line of Mobile Scanners

Unlike relying on a desktop computer that keeps attendants tethered to a desk, portable mobile scanners make checking items in and out faster and easier, by allowing attendants to bring the scanners with them around the crib and scan items instantly. With mobile scanners, you can issue and return items whenever you need to, or reorder inventory right when you notice stock getting low, helping avoid stockouts.

Our new scanners will help modernize your daily operations even more, by giving you the freedom to do your job from anywhere in the facility. You don't need to be tied to a computer—instead, you can use the scanners from anywhere, meaning you can accomplish your daily tasks throughout the facility, while simultaneously staying connected to your tool crib.

These small, handheld devices give you the freedom to perform cycle counts on the go, while scanning inventory or performing reorders—you don't need to choose between tasks, or worry about stepping away from your computer when it's time to scan inventory. The end result is a modernized and connected storeroom, that easily and seamlessly operates at peak efficiency.

### Works like Your Smartphone

The latest scanning solutions have been re-designed with convenience in mind. They have options featuring larger touchscreens, and are based on the Android operating system, meaning they're easy to learn and use.

### Easily Portable

Our mobile scanners are small and lightweight, eliminating the need to tote bulky laptops or tablets around large facilities or tool cribs. Instead, these small & thin devices allow you to freely move around the crib while you work, without needing to waste time traveling back to a computer. With pistol-grip accessories, these devices are easy to use wherever you need.

### WiFi Enabled with Network Support

All devices are WiFi-enabled, so your device will work from anywhere in the facility, allowing you to keep operations running smoothly no matter where you are. Some mobile scanning devices even have data plans\*, meaning it can act as a smartphone and scanner all in one. Our scanners are all equipped with Batch Mode, which means that even without a steady WiFi connection, all your data and information will be recorded and saved until a better connection is established.

### Security You Can Count On

These scanners also have added security for increased network and data control. They run on a new Android operating system that provides regular security patches, which means you can control network access, WiFi, and more.

\*Data plans not provided or paid for by CribMaster

# Stay Connected with CM Mobile NG

Our new scanners work seamlessly with the CM Mobile NG mobile app, which was designed to help you maximize your productivity and efficiency in managing your tool crib. CM Mobile NG lets you access and manage your tool cribs from any mobile device, including our full line of mobile scanners.

CM Mobile NG lets you stay connected to your daily operations as you navigate around your tool crib.

## How Does CM Mobile NG Work?

### Create a Connected Tool Crib

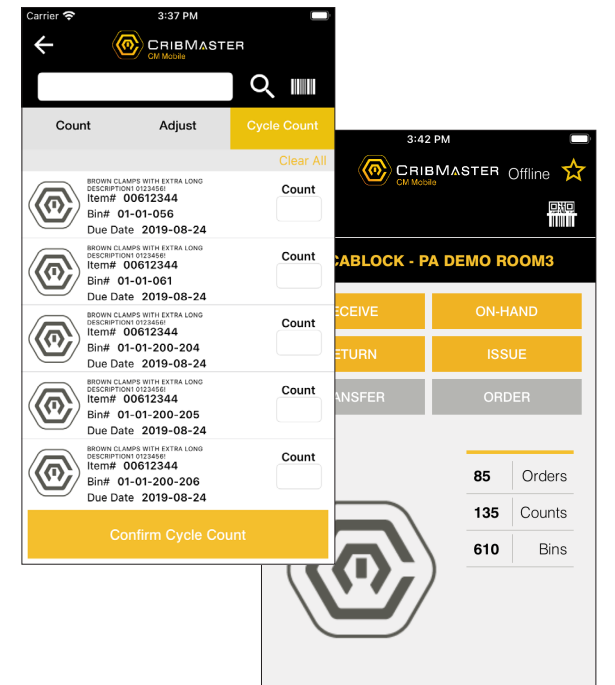

Our mobile scanning solutions are designed with a more modern, connected workplace in mind—and CM Mobile NG helps you create just that. Compatible with all Android OS scanners, CM Mobile NG gives you access to the important information you need anytime, anywhere.

### Access to Critical Data

The great thing about our mobile scanning solutions is that you aren't tethered to a computer all day. CM Mobile NG makes it easy to stay connected to important inventory information no matter where you are. View inventory levels, incoming orders, and perform cycle counts all while on the go.

### Access CribMaster Anywhere

CM Mobile NG only needs WiFi or cell reception to access all your information. And, if connections are unreliable, CM Mobile NG will store your data and transactions in Batch Mode until a better connection is established.

# Stay Connected with CM Mobile NG

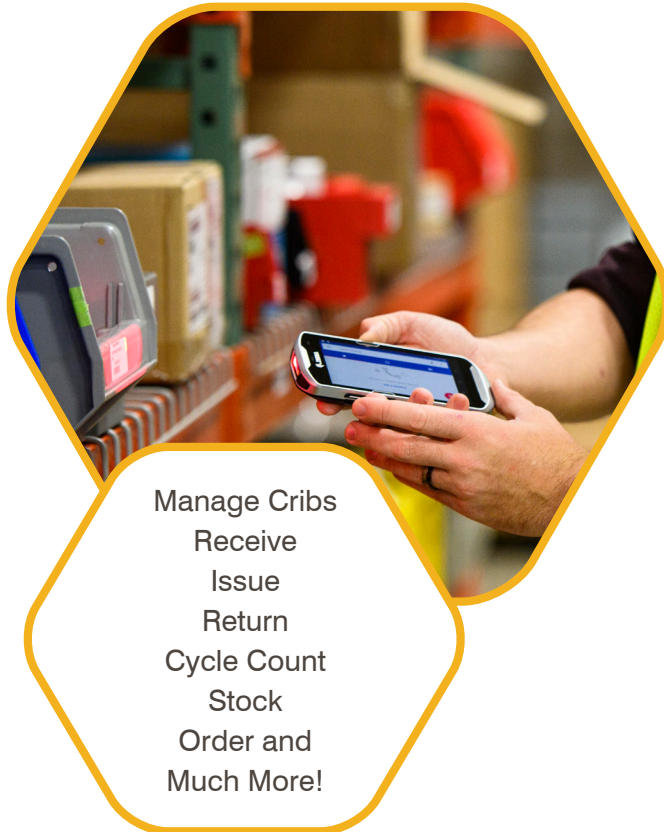

## How Does CM Mobile NG Work?

### Multisite Visibility

CM Mobile NG makes it easy to manage multiple facilities or tool cribs at once. You can get an at-a-glance view of all your cribs, and view important data for each one.

### Issue & Return from Anywhere

By logging into CM Mobile NG on your mobile scanning device, you can vend and return items from your CribMaster machines. Not only does this reduce the need to use shared devices, but it keeps transactions moving quickly.

# A Scanner for Every Need

**TC57** – The TC57 is the ultimate blend of industrial ruggedness and cutting-edge technology. With high-speed technology, it's designed to maximize productivity and cut down on unnecessary processing times. Its similarities to an Android phone means it's easy to learn and use, and its touchscreen works with gloves or a stylus—even when wet—making it sleek and durable.

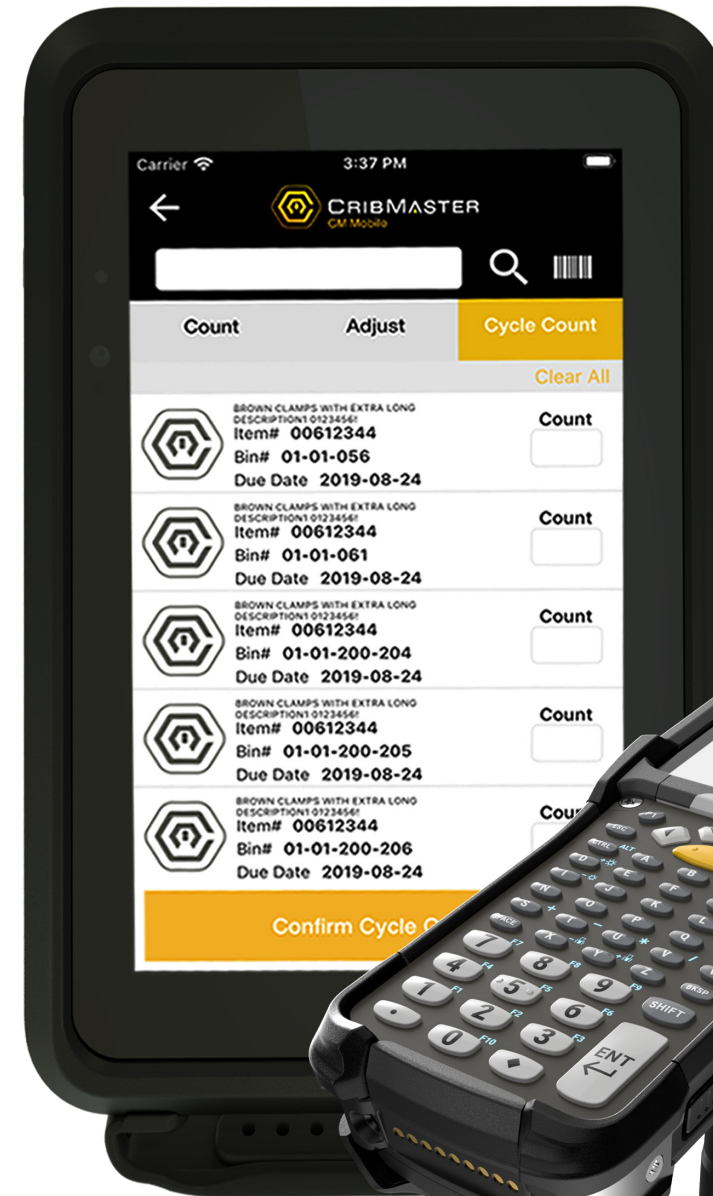

Our mobile scanners come in a variety of different styles, so you can pick your preference and ensure you're choosing the solution that works best for your business.

**TC21 & TC26** – The TC21 and TC26 are the ultimate portable scanners. They're thin and lightweight, making them easy to carry around, and both are WiFi-enabled—the TC26 can even run on cellular data. Their small size and large touchscreen makes them easy to use with one hand, for maximum convenience.

**ET51** – The ET51 is the ultimate in mobile inventory management. A thin, lightweight tablet with a large touchscreen, the ET51 is WiFi enabled, easy to carry around, and can run CM Web via a web browser, meaning it has the functionality to support both scanning and the administrative work that keeps your facility running.

**MC9300** – With an extended battery life, extra-long scan ranges, and increased WiFi capability, the MC9300 is an ultra-rugged scanner, ideal for industrial environments. A large touchscreen with an optional keypad makes it easy to use, and a pistol grip accessory makes it easy and comfortable to carry and scan.

**RS5100** – The RS5100 is a modern “ring style” hands-free scanner designed to maximize productivity. It easily fits on your finger, making point-and-shoot scanning easy and straightforward, while freeing up both hands so you can focus on other tasks. It's lightweight, comfortable to wear, and simple yet efficient to use.
