WINWARE RELEASES CRIBMASTER 7.0 INVENTORY MANAGEMENT SOFTWARE

Marietta, GA – WinWare Inc. is proud to announce its latest software release, CribMaster 7.0. WinWare takes pride in providing the manufacturing industry's most comprehensive, cost-effective solutions in tooling management and distribution. Now CribMaster 7.0 continues its advancement by adding some great new feature sets.

The CribMaster system monitors tool inventory and usage, tracks consumption and budget, issues purchase orders either automatically or manually, and includes more than 190 standard reports tied directly to the database. CribMaster's flexibility means it fits the needs of manufacturers of any size, whether using an attended toolcrib or store room, automated storage, or a combination of both. Still an option with CribMaster 7.0 is the Preventive Maintenance Module, which adds a work order system that automates scheduling and tracking of maintenance and repairs to assets.

CribMaster 7.0 includes new features that continue to propel CribMaster to yet another level.

Some of the new features include:

ATR RoboCrib receiving improvements. Makes stocking a RoboCrib easy.

New ATR Options for Return Unusable: Optionally, ATR will allow the RETURN UNUSABLE function regardless of the employee's access permissions.

New ATR Option for STARTME Screen: Optionally, permit the STARTME file to be ignored

ATR Screen Modified to Fit Smaller display screens: A KEY button has been added to the main ATR screen that will allow the operator to reach the Alpha Keypad.

CribBin naming conventions changed for ToolBoss: to support proper handling of multiple items per drawer with drawer opening just enough to expose selected item.

ATR Performance Improvement: Significant performance improvements to application initialization and to more efficiently manage large item/bin lists

ATR Action Barcodes: used for OPEN and RECEIVE functions

ATR allow the issue of certain items based on inventory group: to be issued without regard to overdue warnings or certain other restrictions such as begin and end times or cost limits.

Safestock: Improved diagnostics and tracing for machines

New Custom Field View Option: to control whether custom field is displayed as a column in list views or not

User Defined Label Names: for reports available at print time

Scheduled Reports: capability to change email address

Security Access Privileges: for WO Status changes because of changes to ordering requirements (e.g. "Parts needed" vs. "Open/Assigned" are now privileged and do not require specific WO status permission

New Fields added to Purchase Order Record: Buyer, Account, Deliver To fields have been added to the purchase order

New Inventory Group setting to allow issue: if Employee has other items overdue

Allow Remote Entry of License: as long as CM Server hardware ID has been registered on the database.

Custom field support for Kit table (association between kit and component item)

**New Kit Properties page, combining custom field information and extended template data
New Option to Copy Custom fields from Kit: to Serialized components at issue time
New Option to Ignore Holidays: and user-selected days of the week when calculating usage days**

New Holiday date range type and Holiday Generator

Show a list of all assembly deficiencies: when issuing an assembly

Select Serial ID button: on Issue and Complete Transfer screen toolbars

New field for storing secondary Master gauge: for gauge certification records.

Store actual gauge usage at calibration time in certification record. Provide for recovery of usage back to gauge if certification record is deleted.

New options for sending overdue gauges to calibration: when being returned as part of an assembly.

New dialog to send overdue assembly gauges to calibration: when returning assemblies. Also, new option for enabling the dialog.

Improved sorting support: on Kit Inspection screen

Add gauge-related fields: to Kit Inspection screen

New "Assemble Kit": toolbar button

Prophet21 Interface enhancements:

Consignment implementation

Custom field support for Event Log table to enable enhanced error reporting and processing

About the Company

WinWare Inc. was established in 1992 in Marietta, Ga., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and inventory in the manufacturing environment. WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small. The company is committed to providing expert software and hardware solutions for today's manufacturing inventory problems. Visit WinWare's Web site at www.CribMaster.com.
