

## Automatic Exports

CribMaster has been developed with the help of some of the largest manufacturers in the world and is the most robust application available for managing tooling and supplies in the manufacturing workplace. Because of this, we encourage users to take full advantage of the polished tracking, inventory management and purchasing functions performed by CribMaster. We are aware that in some instances ERP applications or purchasing systems are already in place and it is crucial for the manufacturer to share the information generated by CribMaster with another application. CribMaster has a simple solution.

CribMaster currently shares information with many ERP, MRP and purchasing applications using a simple flat file export and we currently have a custom export available for Profit 21 Users. (example 1) Rather than complex interfaces for hundreds of different applications that may want to make use of the information generated by CribMaster, our developers have enabled a scheduled automatic export to take place from CribMaster. This information is then placed in a folder on your network to be imported into the application in which you are looking to integrate or more appropriately "share information".

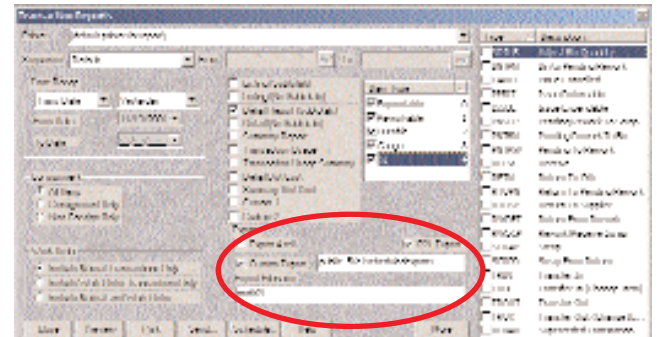

CribMaster provides 3 native exports: PO Detail, Receipts, and Transactions. All of these exports are invoked from the respective report dialog boxes and provide an export in CSV (Comma separated values) format and each provides many fields of data. You can look at the files exported with Microsoft Excel or with Notepad. There is a header line (the first row) that gives a name to each column of data.

All of these exports can be scheduled just like any CribMaster report. (example 2) You can also attach these exports to an email using the schedule dialog. (example 3)

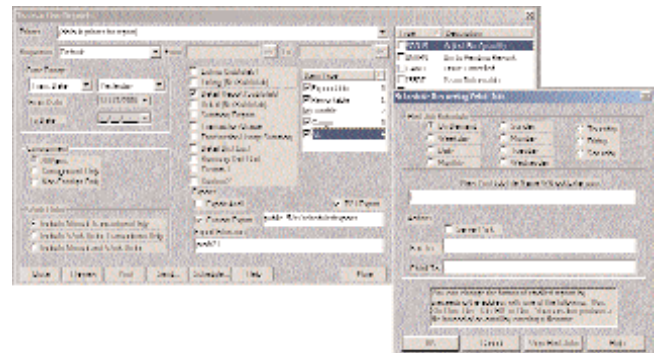

## Exporting Data Using Crystal Reports

You can now create your own exports by generating a Crystal report that produces the data you want. This gives you the ability to export other types of data such as Employee data, Inventory data, and Bin data. All of CribMaster's reporting is done with Crystal Reports which is a very common reporting application and reports can be generated using any of your required information to share.

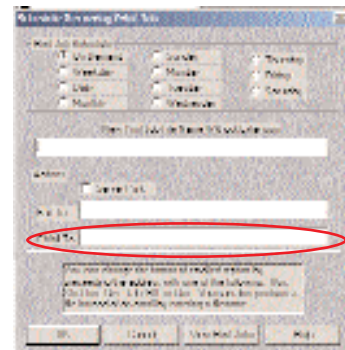

This feature allows you to enable the export of any information in CribMaster using the same scheduled dialogue as described above. By utilizing Crystal the export of any information is easily accomplished by building custom reports containing the type of information and format required for your export. Refer to the screen shots on the right for a better understanding. If you have further questions about enabling interfaces with other applications, please call WinWare at 888.419.1399.

Example 1 - Export Selections from the Transaction Report Screen.

Example 2 - Transaction Report Screen and report scheduler dialogue.

Example 3 - Email commands from the report scheduler dialogue.

## Available Export File Formats from Crystal Reports

- |                               |                             |
|-------------------------------|-----------------------------|
| Character Separated Values    | Lotus 123 (WK1)             |
| Comma Separated Values        | Lotus 123 (WK3)             |
| Crystal Reports (RPT)         | Lotus 123 (WKS)             |
| Crystal Reports 7.0 (RPT)     | ODBC (Data Sources)         |
| Data Interchange Format (DIF) | ODBC FoxPro Files - Word    |
| Excel 5.0 (xls)               | ODBC MS Access Database     |
| Excel 5.0 (xls) Extended      | ODBC Visual FoxPro Database |
| Excel 7.0 (xls)               | ODBC Visual FoxPro Tables   |
| Excel 7.0 (xls) Extended      | Paginated Text              |
| Excel 8.0 (xls)               | Rich Text Format            |
| Excel 8.0 (xls) Extended      | Tab Separated Text          |
|                               | and others...               |
