CribMaster System

Complete Inventory Control

CribMaster Inventory Management System

World Leader

CribMaster is the world's leading toolcrib inventory management system. Its comprehensive tool management, purchasing system, reports, and cost accounting system make it a productive tool no company should be without. CribMaster's Integrated Supply support allows distributors to easily manage customer and consignment inventory from the office.

Windows 2000/XP/Vista/7

CribMaster was developed using the latest technologies designed for these Windows systems. This assures you have a state-of-the-art software package that is easy to use and easy to integrate. CribMaster uses Crystal Reports, an industry leading report generation tool, to produce all its reports. You can use this tool to customize CribMaster's standard reports or produce new reports linked directly to the CribMaster database.

Multiple Users

CribMaster is able to handle many users at the same time. Multiple toolcribs, automated tool dispensers, purchasing agents, ME's and suppliers can all access the same database at the same time. This means you will not have to duplicate your items, employees or machines. Depending on the database you select, CribMaster will use either record-level locking or field-level locking to assure that two users do not update the same information at the same time.

Context Sensitive Help

CribMaster includes extensive on-line, context-sensitive help. If you are not sure what to do, simply press F1 and help for the current screen will appear. CribMaster's help also includes powerful search capabilities to help you locate the specific information you need.

Scalable/Configurable

CribMaster is the most comprehensive package on the market today including detailed cost accounting, inventory tracking, bar coding, automated tool dispensers, and more. You can start with basic information and add detail as you become more familiar with the CribMaster system. It is as easy as changing a configuration option.

An Enterprise Wide System

To put it simply, CribMaster is the enterprise wide system that will change the way your company does business. By integrating your Toolcribs, Parts Cribs Engineers, Quality, Purchasing and Maintenance departments into one system and using bar code scanners, automated tool dispensers, lockers, and batch scanners to perform your day to day operations, CribMaster will save you time and money and operate your plant more efficiently. Link several facilities together with Data Warehouse and allow intersite transfers of surplus items. One step closer to your entire enterprise running at optimum inventory levels.
