Signal Blocking Panels

## CribMaster RFID Screens

As your employee opens the door of the AccuPort, the highly-sensitive readers located inside the portal begin to read the RFID tags on items housed in the storeroom area. Does this sound familiar? Blocking RFID signals in small spaces can be challenging. To maintain accuracy, you want to ensure that the only items being read are the ones passing through the portal not the items that are inside the crib each time the door is open. We've developed precisely the solution to totally block RFID signals in small spaces.

The flexible positioning of the CribMaster RFID Screens allows you to strategically place the screens in the ideal location in your storeroom to completely block any RFID signal. These screens are sold in pairs and can be positioned side-by-side or at any angle. Designed with clear poly carbonate sheets coated with a special RF-blocking material encased in sturdy steel-constructed frames, these panels provide the total RFID signal blockage you need to maintain 100% accuracy in managing inventory in small spaces. This allows you to successfully block signal in small areas or restore usable space in larger cribs.
