WINWARE RELEASES THE CRIBMASTER REVOLUTION POINT-OF-USE DISTRIBUTION DEVICE

Marietta, GA – WinWare has combined the world's leading toolcrib automation software with a reliable dispensing machine that allows the storage, distribution and return of unique items. The CribMaster Revolution includes features that propel the CribMaster system to yet another level. The Revolution rotates on command to deliver the item you have selected to an access door and also allows for a simple return process.

"Like the other CribMaster point-of-use distribution devices, the Revolution is simple to use," states Larry Harper, WinWare President. The user walks up to the Revolution, scans an employee badge with the attached scanner or uses the touch screen to enter their name and password. The user selects the tool or supply they are dispensing and the carousel turns, a door opens and allows the user to take the item. Once entered into the system the user is allowed to access tooling or supplies that their security level permits. The Revolution captures not only who is obtaining the tooling or supplies, but also what department they are from, machine they are working on, etc. This criteria is totally user definable which means each organization can set the machine to track cost centers that are appropriate for their operation. So every time a tool or supply is dispensed they can report where it was used, who used it and for what.

Mr. Harper goes on to state, "The Revolution is great for storing and distributing durable items that need to be returned." When returning an item, the user simply walks up to the machine and scans an employee badge with the attached scanner or uses the touch screen to enter his/her name and password. The user then selects return mode from the touch screen and the Revolution shows them exactly which tools or supplies they are accountable for. The user then selects the tool or supply they are returning and the carousel turns and opens the door and allows them to return it to the machine.

"The Revolution is something that has developed from user response. Current CribMaster users have requested a way to distribute and return many unique items and the Revolution is a cost effective, reliable answer to their request," says Mr. Harper. "Our support and training staff spend a lot of time on the road visiting users and implementing new products to enhance CribMaster systems. This builds relationships and allows us to obtain feedback, which guarantees we are providing our users what they need."

The Revolution is an addition to CribMaster, which is an all-inclusive inventory control system that improves manufacturers' ability to distribute and track tools and other supplies with accuracy and confidence. The system is controlled by Windows-based software, developed specifically for the manufacturing industry and uses bar coding to tie fast and reliable toolcrib transactions to a powerful system of inventory control.

About the Company

WinWare Inc. was established in 1992 in Marietta, Ga., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and inventory in the manufacturing environment. WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small. The company is committed to providing expert software and hardware solutions for today's manufacturing inventory problems. Visit WinWare's Web site at www.CribMaster.com.
