

CribMaster Scanners

B e n e f i t s o f C M R a d i o

Scan the employee badge that is printed by CribMaster

Locate the tool.

Scan the bin bar-code generated by CribMaster.

Select the quantity, hit the enter button and immediately log the transaction which adjusts your inventory.

Why CribMaster Radio Scanners

SPEED OF ISSUE

If your operation is like most and your toolcrib attendants rely on the ability to easily search, retrieve and issue tools in a very short amount of time...the real question is; "Why not CribMaster Radio". Most operations rely on easy and speedy transactions to keep production at its maximum. You typically don't have the time to share pictures of the kids or wait an eternity while your crib attendant locates a product, retrieves it, logs it into the computer and finally hands it over to you. With CribMaster Radio Scanners the process is fast and computer free. Scan the badge, get the tool, scan the bin bar code and record the transaction. All immediate and in real-time. You can even select the correct serial number if you are tracking items by its serial number.

HANDS FREE CYCLE COUNTING

Cycle counting is an important part of staying on top of your inventory. Without the scanners you may stand at the group of bins or cabinets that are being counted and write your counted quantities on paper. Then you would go back to your computer and record those counts in CribMaster. This is fine if you have the resources and time. With the Radio Scanner CribMaster prints a list of items for you to count. You locate those bins or cabinets, confirm quantities and make adjustments. All of this is done real-time with the ease of bar-code scanning.

MORE EFFICIENT RECEIPT OF INVENTORY

Now when you receive items for your crib you can scan the bar codes on the purchase order to immediately confirm receipt of items. With all the receive functions of CribMaster, Radio Scanners not only allow you to be more efficient but more accurate with the items you are receiving from your suppliers.

QUICKLY ACCEPT ITEM RETURNS

Think about how much time you save by scanning bar codes when items are returned. You Never have to touch your computer and instantly log the return. The scanner even allows you to return serialized items by prompting you to select the correct serial number being returned.

ASSEMBLE KITS

Does your operation issue tools in kits or assemblies? You can now put together that group of items using a Radio Scanner and never have to interrupt your crib computer. Walk your crib locating and scanning bar codes is all it takes to put your kits together...and then those kits can be issued with a single scan.

CribMaster RF Scanners enable you to issue items, return items, cycle count, receive and even assemble kits from anywhere in your toolcrib. The CribMaster Scanners are wireless and will allow you to roam freely about your crib and log all of your activity real time with CribMaster.

The CribMaster Scanners allow you to:

- | | |
|-----------------------------------|--|
| Bar Code or Key Enter Data | Issue and Receive Items |
| Return Used Items | Cycle Count |
| Assemble Kits | Communicate Real Time with CribMaster |
| Communicate in Batch Mode | Expand Coverage and Range as Needed |

and much more ...
