## **WINWARE RELEASES CRIBMASTER 5.0 INVENTORY MANAGEMENT SOFTWARE**

Marietta, GA – WinWare Inc. is proud to announce its latest software release, CribMaster 5.0. WinWare takes pride in providing the manufacturing industry's most comprehensive, cost-effective solutions in tooling automation and management.

The CribMaster system monitors tool inventory and usage, tracks consumption and budget, issues purchase orders either automatically or manually, and includes more than 170 standard reports tied directly to the database. CribMaster's flexibility means it fits the needs of manufacturers of any size, whether using an attended toolcrib, automated storage, or a combination of both. Still an option with CribMaster 5.0 is the Preventive Maintenance Module, which adds a work order system that automates scheduling and tracking of maintenance and repairs to assets.

CribMaster is an all-inclusive inventory control system that improves manufacturers' ability to distribute and track tools and other supplies with accuracy and confidence. The Windows-based software, developed specifically for the manufacturing industry, uses bar coding to tie fast and reliable toolcrib and automated storage and retrieval transactions to a powerful system of inventory control. CribMaster 5.0 includes new features that propel CribMaster to yet another level.

Some of the new features include:

**ATR Recently Issued Items List** After an employee has been chosen, you may switch the item list to be a list of recently issued items for this employee by pressing the items button. Press the items button (Now labeled Recently) again to toggle the list back to all items.

**Save Sales Tax rate with each PO** The sales tax rate is now saved with each PO and can be edited on the PO property dialog.

**Sequencing of Tasks on Work Orders and Work Order Templates** There is now an easy interface to re-sequence tasks on both Work Orders and Work Order Templates.

**Print Label button on the Bin Property page** This makes it easier to print a label for a new bin added to the system.

**New flexibility in specifying Measurements used in Gauge Calibration.** You may enter the min and max valid values instead of having them calculated from the Set Point and Tolerance. This is more friendly for gauges that only have tolerance in one direction like GO / NO-GO gauges

**Multiple Helix Bins** ATR now supports multiple helixes containing the same item. You can fill 2 helixes with the same item or fill a whole vending machine with one item. It'll be treated as one bin for issuing and purchasing.

**Vend Rework items before new** – Allows you to tell ATR to find rework items to vend first.

**Alerts for Critical Quantity levels** You can set critical quantity levels on any bins desired and CribMaster will automatically send an email to the appropriate email address.

**Lot Number Tracking** CribMaster supports lot number tracking for expendable and non-serialized durable items.

**AutoPurchase by Bin Location** CribMaster now supports two ways to specify auto-purchase items when using the autopurchase some items option.

**Multiple Recipients for email and fax** You may now specify multiple recipients by separating them with a semicolon.

**Subject for email** you may now specify a subject for emailed reports by appending a colon and the subject to the email address.

**Ability to import Receives of purchased items** CribMaster provides a new rule file format to process receives.

**Web Catalog interface** CribMaster now exposes an interface that allows participating suppliers to make their catalogs available on the internet. CribMaster users can browse for items and press the "Add to CribMaster" button to automatically load item information and pricing into the CribMaster database.

**Save Current Sort** You may save the sort sequence for each view of records in CribMaster. Just right click on a column header and choose "Save Current Sort". There is a "Clear Sort" choice to return to the default sort for each screen.

**Link to the CribMaster Home Page** under Help on the menu.

**Overdue Checkouts Report.** This new report uses the Due date in the Checkout record. The due date is inserted at issued time based on the global option: "Elapsed time before checked out items overdue" or the item level override on the inventory properties "More" tab: "Checkout time limit (days)".

### **ATR Supports 3 new storage devices**

Kardex Titan

Hanel MP12A Lean Lift

Kardex UK Sentinel

**ATR Observes IssuePastDueGauge option** Prevents the issuance of gauges that need calibration.

**ATR can allow the Return List to be automatically filtered by logged in employee.**

This works best when the option "Require PIN for RETURN Mode" is ON

**ATR Allows pressing ISSUE BUTTON directly from the DETAILS window.**

**ATR added Bar Code Stringing.** The program will recognize a bar code containing more than one ID value. For example a bar code, which contains a Department identifier and a Machine identifier. The bar codes must be separated by the forward slash. For example, a bar code containing \*/D1234/M9876\* might be interpreted as Department 1234 and Machine 9876.

**ATR allows some Locker cribs to be defined as "Return Only" cribs.** No issues permitted.

Example: You want to dispense from a Revolution and return to a locker. Once returned, the item is no longer available for issue

**New Fail Button** on the Inspect Receipts dialog

### **About the Company**

WinWare Inc. was established in 1992 in Marietta, Ga., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and inventory in the manufacturing environment. WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small. The company is committed to providing expert software and hardware solutions for today's manufacturing inventory problems. Visit WinWare's Web site at [www.CribMaster.com](http://www.CribMaster.com).
