WINWARE LAUNCHES CRIBMASTER9 THE NEW EVOLUTION OF INVENTORY MANAGEMENT SOFTWARE

Marietta, GA – WinWare Inc. is proud to announce the launch of CribMaster9. WinWare has taken the industry leading application for managing indirect material to a whole new level. WinWare has taken advantage of new programming methods to re-construct the feature rich application enabling the benefits of a modern interface to speed navigation through the system, true N-tier deployment capabilities to satisfy most IT requirements, and business object integration capabilities to enhance integration capabilities with other applications.

The new CribMaster9 interface uses a ribbon methodology to provide a new clean look and easier navigation with the same great functionality. CribMaster9 is all about custom configuration and easy navigation so custom view settings can be configured for individual users. For example, the roaming profile feature allows unique settings to be stored in the database which allow those settings to follow the user to any PC. The customized start page allows individual users to build custom reports on their dashboard keeping their critical data in the fore front. The quick access toolbar means more ways to navigate using shortcuts saving users time navigating to commonly used screens.

In efforts to speed navigation and interaction with CribMaster9, WinWare has enabled In-Grid Editing and Data Validation which makes editing data now faster than ever. WinWare has also created drop-down menus for In-Grid Lookups that make searching dynamic content a breeze. Also, the ability to create and save custom views with true print screen capabilities makes analyzing data fast and easy. All the same great standard reporting is still available with CribMaster9. With the added ability to create custom views on the fly, your reporting needs are met faster and easier.

From an IT deployment viewpoint, CribMaster can be deployed in a true N-tier environment. The new connection methods give CribMaster9 the ability to connect to four different types of Remote Data Portals (Web Services, WCF, .NET Remoting and Enterprise Services Hosting). ADO.NET versus ODBC Connections is a more secure and faster database connection. This gives IT professionals choices not available with previous versions of CribMaster. Easier and more flexible integration methods are also available with CribMaster9. CribMaster9 is written using business objects which allows for greater integration possibilities and as well now supports REX files for integration.

About WinWare

WinWare Inc. was established in 1992 in Marietta, GA., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and inventory in productive environments. WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small.
