CRIBMASTER ENHANCES PRODUCT LINE WITH KITMASTER, THE COMPLETE INDUSTRIAL KITTING SOLUTION

CribMaster, the global leader in providing solutions to manage indirect materials, introduces KitMaster to their line of tool control products and services. KitMaster is a turn-key solution that offers complete tool kits, foaming, etching, custom storage, the full line of Stanley Black & Decker products, and the ability to source multiple brands for custom kitting.

“As the leaders in tool control solutions, we felt that by offering this enhancement to our product line, we would provide a single source to meet any tool and kitting need,” explains Larry Harper, CribMaster President. “We are excited to work with our local distribution partners to provide complete customized kits, etching, and service backed by an unmatched warranty program all under one roof,” adds Harper.

CribMaster is no stranger to aerospace manufacturers and nuclear facilities for tool control. Since the early 1990’s, they have been successfully providing RFID tool-control solutions in environments where FOD (Foreign Object Damage) and FME (Foreign Material Exclusion) prevention is critical. The full-service kitting offering is a natural fit for these customers and manufacturers of all types who are focused on 5S and lean principles.

The state-of-the-art equipment located in CribMaster’s Marietta, GA facility allows for varied pocket depths, customized shapes, and tight-pocket fits. The foam used to create these kits is thermally bonded to increase strength and greatly reduce the chance for separation or peeling that can occur with standard adhesive-bound kits. The foam inserts with cavities precut using the exact tool dimensions of each individual tool allows for a snug fit so that there is no shifting, sliding, or moving. The KitMaster kitting solution can be customized to fit any storage system, including cabinets, chests, drawer system, shelving units, and soft-sided pouches.

KitMaster also offers the ability to laser etch all tools with any identifying information, such as model numbers, employee, company names, logos, and images. Additionally, kits can be upgraded with RFID tags for even more tool identification and security.

About CribMaster

CribMaster was established in 1992 in Marietta, GA., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and inventory in productive environments. CribMaster has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small. The company is committed to providing expert software and hardware solutions. Visit them at <http://www.cribmaster.com>.
