## **WINWARE RELEASES THE CRIBMASTER AUTOMATED MTF (MOBILE TOOL FACILITY)**

Marietta, GA – WinWare Inc. announces the addition of the CribMaster Mobile Tool Facility (MTF) to enable a secure, self managing mobile tool room utilizing proven RFID technology.

“This device enhances our extensive line of RFID products and provides a real solution to challenging situations to manage tools like turnarounds or during construction projects,” states Larry Harper, WinWare president, “our goal was to enable a tool room to be driven on-site and dropped off, while providing a high-level of accountability for the worker and automated supply-chain replenishment for supplies.” Driven by CribMaster software, the leading inventory management application for indirect materials in manufacturing and productive environments, the MTF adds yet another inventory management option to an already extensive line of solutions. Harper adds, “Our goal is to have the right inventory management solution for any indirect material, no matter the processes or business culture. The CribMaster MTF adds some impressive benefits and well thought out features that make it a very desirable tool management solution.”

The CribMaster MTF utilizes the CribMaster Accu-Port as the gated, secure entry method into the tool trailer. The tool trailer is a 53’ air conditioned trailer that monitors movement of all tools and supplies through the Accu-Port. WinWare has established a standard RFID tag selection of nearly 60 different tagging solutions from embeddable wire tags to standard paper RFID tags. With years of experience offering solutions to manage tools using RFID, WinWare knows what it takes to retain 99% + accuracy with inventory reads. The MTF comes complete and ready to go with additional features like total wireless network connection capability, an audible door alarm to notify if the door stays open for an extended period of time, a Vidmar cabinet, table space, plastic bins, video surveillance system with 3 cameras, shelving units, hoists, and more.

The CribMaster software that drives the MTF provides all the functionality needed to manage any type of indirect material. From tooling, spare parts inventory, PPE, MRO, etc., CribMaster is a robust and flexible inventory management application that was built by supporting the processes associated with this type of inventory. CribMaster currently has over 1900 customers in 13 countries and is the clear leader in providing technology to assist customers in reducing usage, tracking inventory movement and processes and developing more effective replenishment.

### About WinWare

WinWare Inc. was established in 1992 in Marietta, GA., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and indirect material in productive environments. WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small.
