WINWARE ANNOUNCES COLLABORATION WITH JOBSITE RESOURCES TO CREATE THE CRIBMASTER RFID TURNAROUND TRAILER

Marietta, GA – WinWare Inc. announces the collaboration with JobSite Resources to create the addition of the CribMaster RFID Turnaround Trailer for complete turn key solutions utilizing proven RFID technology.

“This device enhances our extensive line of RFID products and provides a real solution to challenging situations in managing tools during turnarounds or construction projects,” states Larry Harper, WinWare’s president, “our goal was to enable a self-managing tool trailer to be driven on-site and dropped off, while providing a high level of accountability for employees and contractors during turnarounds.” Driven by CribMaster software, the leading inventory management application for indirect materials in manufacturing and productive environments, the Turnaround Trailer or Mobile Tool Facility (MTF) adds yet another inventory management option to an already extensive line of solutions. Harper adds, “Our goal is to have the right inventory management solution for any indirect material, no matter the processes or business culture. The CribMaster MTF adds some impressive benefits and well thought out features that result in dramatic lost tool cost reduction.”

The CribMaster MTF utilizes the CribMaster Accu-Port as the gated, secure entry method into the tool trailer. The tool trailer is a 53’ air conditioned trailer that monitors movement of all tools and supplies through the Accu-Port. WinWare has established a standard RFID tag selection of nearly 60 different tagging solutions from embeddable wire tags to standard paper RFID tags. With years of experience offering RFID solutions to manage tools, WinWare knows what it takes to retain 99% + accuracy with inventory reads. The MTF comes complete and ready to go with additional features such as total wireless network connection capability, an audible door alarm to notify if the door stays open for an extended period of time, a Vidmar cabinet, table space, plastic bins, video surveillance system with 3 cameras, shelving units, hoists, and more.

The CribMaster software that drives the MTF provides all the functionality needed to manage any type of indirect material and more importantly, provides automated billing based on actual tool usage. CribMaster is a robust and flexible inventory management application that was built by supporting the processes associated with indirect material. CribMaster currently has over 3000 customers in 13 countries and is the clear leader in providing technology to assist customers in reducing usage, tracking inventory movement and processes and developing more effective replenishment.

About WinWare

WinWare Inc. was established in 1992 in Marietta, GA., just outside Atlanta. Its knowledgeable and experienced staff is dedicated to creating enterprise-wide systems that manage tools and indirect material in productive environments.

WinWare has a long-term reputation for providing outstanding customer service and technical support for each of its customers, no matter how large or small. The company is committed to providing expert software and hardware solutions.
